Experiences :

Senior Flutter Developer (Freelance / Side Project) - Oct 2024 - Present - Home Palette APP

Home Palette is an AI-powered interior design and home decoration application that helps users visualize and redesign their living spaces. Users can capture photos of any room and use advanced AI to generate realistic redesign suggestions, experiment with different furniture arrangements, wall colors, flooring options, and decor styles. The app provides house renovation and room remodeling capabilities powered by cutting-edge artificial intelligence, making professional interior design accessible to everyone.

My Role

Flutter Expert Developer / Senior Flutter Developer

- Sole Flutter Developer - Fully designed and built the entire Flutter application from scratch for both iOS and Android
- Implemented AI-driven room redesign features with image processing and real-time AI generation
- Developed in-app purchase flows and subscription management for both platforms
- Handled App Store and Google Play submission, review processes, and ongoing releases
- Integrated third-party AI services for interior design generation and photo processing
- Optimized app performance for smooth image handling and AI processing workflows

Architecture & Tools

- Architecture: Clean Architecture
- State Management: BLoC
- Source Control: GitHub
- Deployment: App Store, Google Play
- Development Process: TDD, DDD

Platforms

- Android, iOS

Technologies

- Core: Dart & Flutter (cross-platform)
- AI Integration: AI-powered room redesign and interior decoration generation
- Image Processing: Photo capture, image manipulation, and AI-enhanced visualization
- Monetization: In-app purchases and subscription management
- Analytics & Monitoring: Crash reporting and user analytics

App Distribution / Stores

- App Store

Key Achievements

- Solely built and launched a complete AI-powered interior design application on both iOS and Android from the ground up
- Successfully published on the App Store with seamless AI-driven room redesign experience
- Delivered a polished, production-ready product combining Flutter expertise with AI/ML integration

Senior Flutter Developer , Oct 2024 – Now , Tehran ToBank (GardeshPay) – Gardeshgari Bank

Project Summary

ToBank is the official digital banking solution of Gardeshgari Bank, designed to deliver reliable, high-security financial services for millions of Iranians. The platform provides secure card-to-card transfers (Shetab network), bill payment, mobile top-up, internet packages, vehicle fines payment, charity donations, travel insurance, and advanced digital wallet features. With a focus on performance, security, and privacy, ToBank ensures compliance with banking standards and provides a seamless multi-platform experience on Android, iOS, and Web.

My Role

Flutter Expert Developer / Senior Flutter Developer

- Led Flutter development for financial and security-critical modules in an enterprise-grade banking app.
- Designed, implemented, and maintained secure payment workflows including wallet, Shetab transfers, and bill pay.
- Developed robust authentication flows: OTP, biometric login, session/device security, encrypted data storage.
- Collaborated closely with backend/DevOps to strengthen anti-fraud features and ensure regulatory compliance.
- Built and maintained automated unit, integration, and widget tests with special focus on financial logic and security.
- Conducted regular code reviews and system audits for compliance and security best practices.

Architecture & Tools

- Architecture: Clean Architecture, Modular Monorepo (Melos)
- State Management: BLoC, GetX
- Development Practices: Test-Driven Development (TDD), Domain-Driven Design (DDD), Robust automated testing
- Version Control: GitHub
- Deployment: Fastlane, Firebase App Distribution
- Project Management: Notion, Agile Scrum

Platforms

- Android, iOS (all major and Iranian app stores), Web

Technologies

- Core: Dart & Flutter (cross-platform), Dio (network), custom secure encrypted storage
- Financial Features: Shetab card integration, wallet and balance management, utility/bill payment, insurance, charity
- Security & Compliance:
 - OTP and biometric authentication flows
 - End-to-end encryption of sensitive data
 - Real-time anti-fraud checks, multi-layer input validation
 - Device/session security and secure backend APIs
 - Secure payment gateway integrations and hardware-backed storage
- Messaging & Analytics: Firebase, Sentry for monitoring, error reporting, and analytics
- Localization: Full RTL (Persian) support, multi-theme UI/UX customization

App Distribution / Stores

- Google Play → <https://play.google.com/store/apps/details?id=com.gardeshpay.app&hl=en>
- Cafe Bazaar → <https://cafebazaar.ir/app/com.gardeshpay.app>
- Myket → <https://myket.ir/app/com.gardeshpay.app>
- Sibirani → <https://sibirani.com/apps/tobank/>
- SibApp → <https://sibapp.com/stories/tobankStory>
- Sibche → <https://sibche.com/app/tobank/>
- SibBazar → <https://sibbazar.com/apps/%D8%AA%D9%88%D8%A8%D8%A7%D9%86%DA%A9-TOBANK/>
- Anardoni → <https://anardoni.com/blog/introducing-tobank-application/>
- iTIPS App Store → <https://appstore.tips.ir/App.com.ipaam.tobank/644>
- Apple Apps → <https://app.appleapps.ir/id/917844/>
- App Star → <https://app-star.store/app.php?id=tobank&source=home>
- Official Website → <https://tobank.ir/>

Key Achievements

- Boosted overall platform security by implementing encrypted storage, device/session binding, anti-fraud logic, and E2E validation for high-value transactions.
- Delivered comprehensive, regulatory-compliant financial services modules, now serving millions of Iranian users.
- Automated deep test coverage for all financial and security flows, drastically reducing incidents and regressions.
- Orchestrated seamless, timely multi-platform launches across all app stores.

Senior Flutter Expert ..PM ..“Jun 2024 - Oct 2024” (Tehran) - DUSK - Project

Dusk :

A VPN solution designed to bypass location-based restrictions and access banned services. Built using Singbox and Xray core technologies, Dusk ensures secure and seamless connectivity to restricted content while maintaining high performance and privacy standards.

Architecture : Clean Architecture

- State Management : BLoC
- Source control : GitHub
- Cloud : Google cloud & Firebase
- Project Management : Notion
- Deployment : Fastlane
- Testing : Unit test, Widget test
- Development process : TDD , DDD
- Platforms : Windows , MacOS , Linux , Android , iOS
- Stores : GitHub , Play store , App store , Microsoft store , Flat hub
- Technologies : Sing-box, X-ray, Core for proxy and traffic management. TUIX, Hysteria, Reality, Trojan, SSH: Various secure , tunneling and obfuscation protocols
- Languages & Frameworks : Dart Flutter, Go, Backend, proxy core (Sing-box, X-ray) , Python, Bash: For scripting and automation. Docker: Containerization. Django as backend .
- Modes : VPN , Proxy , System Proxy , VPN Service
- Related links : <https://github.com/dusk-net/dusk>

Senior Flutter Expert “April 2024 - Jun 2024” (Tehran) - Dolphin Company - Project

Dolphin tracker :

The Dolphin DC100 fleet management GPS model is available in 2G and 4G versions. It is the smallest fleet tracker on the market and can be installed on various types of light, heavy, and semi-heavy vehicle fleets. After installation and setup, the Dolphin fleet tracker allows for online and real-time tracking of the transportation fleet, reviewing the history of traveled routes, and receiving essential security alerts such as alarms for vehicle ignition and shutdown. Display of advertising devices, establish a connection with the selected device, show detailed information of the device's sensors, apply device settings and update the device firmware through an internet connection, commissioned by Dolphin Company, under Android and iOS platforms.

Architecture : Clean Architecture

- State Management : GetX
- Source control : Trello
- Project Management : Jira
- Deployment : In Next Phase ...
- Testing : Unit test, Widget test
- Development process : TDD , DDD
- Platforms : Android , iOS
- Stores : Play store , App store
- Technologies : Real-Time Tracking: Provides online and instantaneous security of transportation fleets. Historical & Allows for the review of the history of traveled routes. Tracking Alerts: Delivers essential security notifications, including alarms for vehicle ignition and shutdown. Bluetooth Low Energy (BLE): Supports BLE for efficient communication and data exchange with compatible devices. Internet-Based Updates: Supports firmware updates and settings adjustments through an internet connection.
- Languages & Frameworks : Dart Flutter

Senior Flutter Expert “Jun 2021 - Jun 2024” (Isfahan) - Rastak Company - Full Time

Hamkelasi Smart Super App :

is a comprehensive and integrated application for managing schools and educational institutions. With it, you can oversee all aspects of your organization! Hamkelasi School Application

For Students: Students can easily participate in online classes or exams, review and submit their homework to their teacher, and also reserve food or request books from the library through the student app.

For Parents: One of the main advantages of the school application for parents is the ability to quickly communicate with school staff and monitor their children's academic and disciplinary status. Parents can also track their children's report cards and performance.

For Teachers: The Hamkelasi app allows teachers to review and record information in the class register, upload and receive assignments, record academic and disciplinary matters, and even communicate with students or parents.

For Administrative Staff: The principal and administrative staff can use the mobile app to review and oversee ongoing school activities. They can view students' academic performance and status through analytical charts and record various disciplinary issues in the system.

Features:

- Available for various operating systems (Android, PWA and iOS).
- Provides different access levels for school staff, parents, and students.
- Includes a notification system and internal messaging management without additional costs.
- Allows for electronic assignment submission and review, as well as offline class register access for teachers.
- Easy to use with a user-friendly and aesthetically pleasing graphical interface to enhance educational services and smarten schools.
- Facilitates effective communication between users and school contacts, improving oversight and recording of disciplinary issues.

Compatibility: The Hamkelasi school application is available for Android and iOS and is compatible with a wide range of mobile devices and tablets.

Free Messaging System: The internal messaging management feature in the Hamkelasi school application allows free communication with school members.

Access Level Management: All users have access to specific sections of the app based on their role within the system and can oversee those sections.

Senior Flutter Expert “Mar 2021 - Sep 2021” (Vilnius – Lithuania) - Aban VPN - Project

Aban VPN :

encrypts your internet connection so that third parties can't track your online activity, making it more secure than a typical proxy, making your Internet safe and secure, especially when you using public free Wi-Fi.

We have built a global VPN network including America, Europe, and Asia, and expand to more countries soon. Most servers are free to use, you can click the flag and change server at any time you want.

- Newest VPN technologies (V2ray, Shadow socks, Trojan)-
- Large number of servers, high-speed bandwidth
- Works with Wi-Fi, 5G, LTE/4G, 3G and all mobile data carriers
- Strict no-logging policy
- Smart choosing server
- Well-designed UI, a few Ads
- No registration or configuration is required
- No additional permissions are required
- Tiny size, safer

Architecture : Clean Architecture

Senior Flutter Developer “Mar 2021 - Jun 2021” (Isfahan) - Rayman Company - Full Time

Tanin Vahy : is the first dramatic spoken translation of the Holy Quran, awarded the title of "Servant of the Quran" by the President in 2023 (1402).

In "Tanin Vahy", the fluent translation of the Holy Quran is presented for the first time in a spoken-dramatic form. All verses are recited with appropriate emotion, and wherever a role or dialogue appears in the verse, actors have performed it dramatically, creating an audio translation accompanied by suitable ambience and diverse sound effects to help the meaning of the divine words resonate more deeply with the audience.

The design, research, recording, and production process of "Tanin Vahy" took more than seven years. In this radio drama-style translation, over 160 voice actors played roles, and 80 technical and executive staff, along with esteemed advisors, collaborated on the project.

In this software, Quranic verses and the fluent Persian translation by Hoiyat al-Islam Qaraati are presented with search and sharing capabilities in an attractive graphic interface.

Architecture : Clean Architecture

- State Management : GetX
- Source control : GitHub
- Project Management : Jira
